

Environmental Policy Commitment

We recognise that our operations can have an effect on the local, regional and global environment therefore we try to make business decisions to improve the environment. A key criterion in choosing our offices on Worton Park was that the business park actively encourages recycling and energy efficiency. Waste card and paper from companies on the site is used to power the central boiler and provide heating across all the buildings.

Torpedo Group Ltd demonstrates its commitment to the environment in the following ways:

- The company operates an Environmental Management System which complies with the requirements of ISO 14001:2004.
- The company is committed to continual improvement in environmental practice and performance, and to the prevention of pollution.
- All environmental regulations, laws and environmental codes of practice will be regarded as setting the minimum standards of environmental performance in all areas of our business.
- The company sets and reviews tangible environmental objectives and targets which are documented, implemented and maintained.
- We endeavor to use environmentally safe and sustainable energy sources to meet our working requirements where possible.
- We actively engage all members of staff through documented training of the importance of environmental awareness and encourage suggestions for improvement from colleagues and clients.
- We will seek to address impact on the environment through the adoption of a sustainable procurement policy and conserve resources through efficient use and careful planning.
- A primary part of our corporate environmental strategy is sustainable waste management and as such we recognise our responsibilities to recycle materials wherever possible.
- We will minimise waste and whenever possible recycle materials and dispose of all waste through safe and responsible methods.
- Through coordinating route planning and delivery schedules and electronic working we seek to realise the dual benefits of reduced fuel consumption and lower exhaust emissions.
